

1. 1_Campaign_Conversion

- Brand has the best conversion percentage, but nonbrand has the most visits
- Pilot had the worst conversion rate and share of traffic

2. 3_Campaign_Device_And_Source_Success

- Looking further, I'm seeing that brand on the desktop with a gsearch does the best conversion rate
- When comparing gsearch and bsearch, the gsearch wins at conversion rate at the similar factor (same utm_campaign and device_type)
- Pilot has the worst conversion rate overall, but desktop pilot does better conversion than mobile (3.26% vs 0.83%)
 - Mobile pilot campaign did bring in more gross revenue, but that's just because it brought in more sessions
 - Desktop brought in higher revenue per session than mobile
- Brand does better than nonbrand campaigns with desktops, while nonbrand slightly outperforms brand on mobile when comparing within the same source
- Socialbook source does the worst for mobile and desktop, but since it only appears with pilot and desktop-targeted campaigns, I'm not able to isolate the source of the cause

3. 2_Product_By_Campaign

- Nonbrand campaign generated more unit sales for every product than any other campaign by a lot
- The Original Mr. Fuzzy had the most sales volume for each campaign
- The order of the campaigns that did the best to the worst for each product by volume is nonbrand, brand, desktop_targeted, and pilot
- For this comparison, success is defined by sales volume
 - Looking at the campaign conversion success chart (01), we can see that nonbrand has greater sales volume; brand has the better conversion rate
 - A reminder from 01 chart, the conversion rate does look pretty similar, but the pilot drops off with the sales volume and conversion rate

4. 3_Campaign_Device_And_Source_Success

- Desktop brings in the best revenue per session for each comparable combination
- Brand campaign brought in more revenue per session and had a higher conversion rate on the desktop

- Nonbrand did do slightly better than brand for the mobile
5. 05_Furthest_For_Non_Orders
 - The landing stage had the largest share of non-converting sessions, especially on mobile
 - If progressed further than the landing stage, the largest share of non-converting sessions was at the product detail stage
 - Sessions that progressed further than the landing stage, desktop nonbuyers reach deeper stages more frequently than mobile users
 - Desktop had the highest rate of site viewers to reach the billing page among non-converting sessions
 - Desktop had a higher share to reach the product detail page among non-converting sessions
 6. 06_Device_Funnel
 - Desktop had a higher rate to reach the completion page at 9.5 percentage points higher from billing to completion
 - Desktop had a higher progression rate at every transition over mobile
 - Both devices saw the biggest drop off from product detail to the cart
 7. 09_Monthly_Device_Performance
 - Overall, the trend of gross revenue is increasing for both mobile and desktop albeit with some variation from month to month
 - Using revenue, there is a bump in sales with a decline in Jan following Dec 2013 and Dec 2014
 - Gross-margin percentage stays relatively stable
 - Refunds also generally rose as the profits and units sold increased. However, there is a spike in refunds in 2014-09. This applies to both devices.
 - Note: This is refunds for that month, but it isn't directly tied to orders for that month
 8. 2_Product_By_Campaign
 - Looking at gross revenue by product and campaign, nonbrand typically brought in more gross revenue
 - With revenue, the order was nonbrand, brand, desktop_targeted, and pilot
 - The order of the products that did the best to worst by overall gross revenue for each campaign was Original Mr. Fuzzy, the Forever Love Bear, the Birthday Sugar Panda, and the Hudson River Mini bear
 - Product ranking was consistent across campaigns
 9. 07_Product_Profitability

- The Original Mr. Fuzzy has the lowest percentage but generates the most total gross profit because of its enormous sales volume
- Birthday Sugar Panda has the highest margin percentage but much lower total profit because it sells fewer units

10.08_Product_Refunds

- The Original Mr. Fuzzy loses the most dollars because it sells vastly more units
- The Birthday Sugar Panda has the highest refund rate, which may indicate the greater product-specific concern
